

The machine which cuts crab's and claw round

OS2

Best crab-shell cutter that cuts without affecting the dignity of the meat.

Easy crab-shell cutting by just placing the leg to cutting and rotating it. Best also for preparation of different dishes.

With double disc cutter cutting the shell, efficient and fast.

Disc cutters mounting is slanted. Operator can see clearly the shell being cut.

Double the work using this machine.

Since it only takes half turn the leg/claw. This is efficient and fast compared with the single-cutter type, less time is consumed in processing. Work burden is also lessened.

Clean to see cutting condition. Easy to use.

Since the cutter position has been arranged aslant, signs that a claw hits a cutter can be seen clearly, efficient cutting can be made.

Easy adjustment of cutting-depth.

Since the two cutter discs can be freely adjusted according to the size of a claw, or the cutting-depth, it can respond to any kind and size of a crab broadly.

Compact and Space-saving design

Space saving design Just 680mmX550mm. Easy to remove with caster.

Cleaning is easy.

Since the cutter section is mounted protruding away from the body, the scraps do not adhere easily to it, thus cleaning is easy. All stainless steel, rust free.

Specifications

Object material	Frozen crab claw
Cutter	Diamond wheel
Cutter size	diameter152x1.5xdiameter25.4
Cutter rotating speed	1330/1600m/min
The motor for cutters	AC200V 3-phase 300Wx2
Cutter edge of a blade interval	15-50mm
Dimensions (machine)	680x550x1270mm
Weight	90kg
Power source	200V 3-phase 50/60Hz
